DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-18, drawn to a communication device and its corresponding method for providing security in a group communication network, classified in class 455, subclass 517.
 - II. Claims 19-26, drawn to a (separate) method for synchronizing encryption and decryption of a data frame in a communication network involved unique code, sequential code and transport frame, classified in class 380, subclass 261 for cryptography.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I, and II are related as combination and subcombinations. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because invention I drawn to a communication device and its corresponding method for providing security in a group communication network, classified in class 455, subclass 517. The subcombination has separate utility whereas invention II is about a (separate) method for synchronizing encryption and decryption of a data frame in a communication network involved unique code, sequential code

and transport frame, classified in class 380, subclass 261 for cryptography. Invention I and II are clearly distinct from each other, as disclosed by the contents of the claim language, because invention I and invention II disclose two separate techniques for use in a communication system.

See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
